

2017 Florida Observational Survey for Child Restraint Use

Preusser Research Group, Inc.
Task Force Meeting, October 25, 2017

Protecting Children Riding in Passenger Vehicles

NHTSA (2014) estimates child safety seats reduce fatality by:

- 71% for infants (under 1-year old) in passenger cars
- 58% in light trucks
- 54% percent for toddlers (1 to 4 years old) in passenger cars
- 59% in light trucks

Among children under 5 years old, an estimated 252 lives were saved 2014

Florida's Child Restraint Laws

Children through age 5 must be properly restrained no matter where they sit inside the passenger vehicle

Recommend that children aged 12 and under should ride properly restrained in the back seat

FLORIDA LAW PROTECTING CHILD PASSENGERS

Statute 316.613

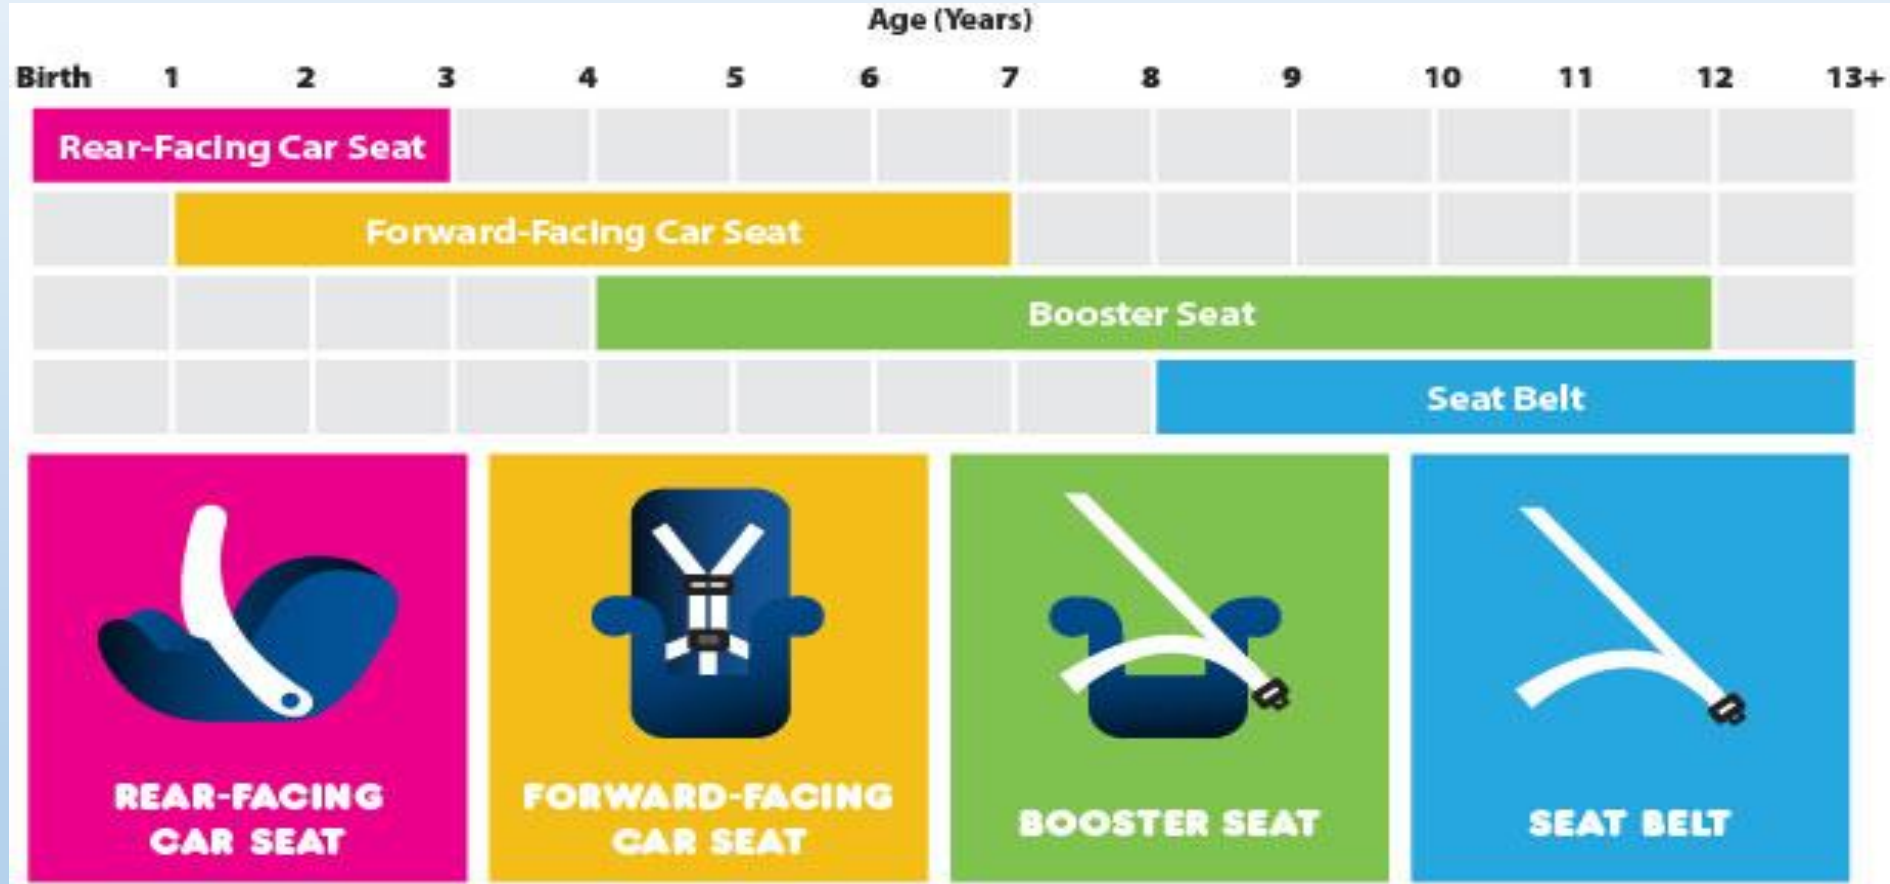

Florida law requires all children from birth to age 3 be placed in a restraint device that is a separate carrier or a vehicle manufacturer's integrated car seat.

Florida law requires all children 4 and 5 years of age to ride in a separate carrier, an integrated child seat or child booster seat, or safety belt.

The Florida Department of Transportation and The Florida Department of Highway Safety and Motor Vehicles recommends keeping children ages 12 and under in the back seat.

What is the fine for a child restraint violation? \$60.00 and 3 points.

Types of Restraint

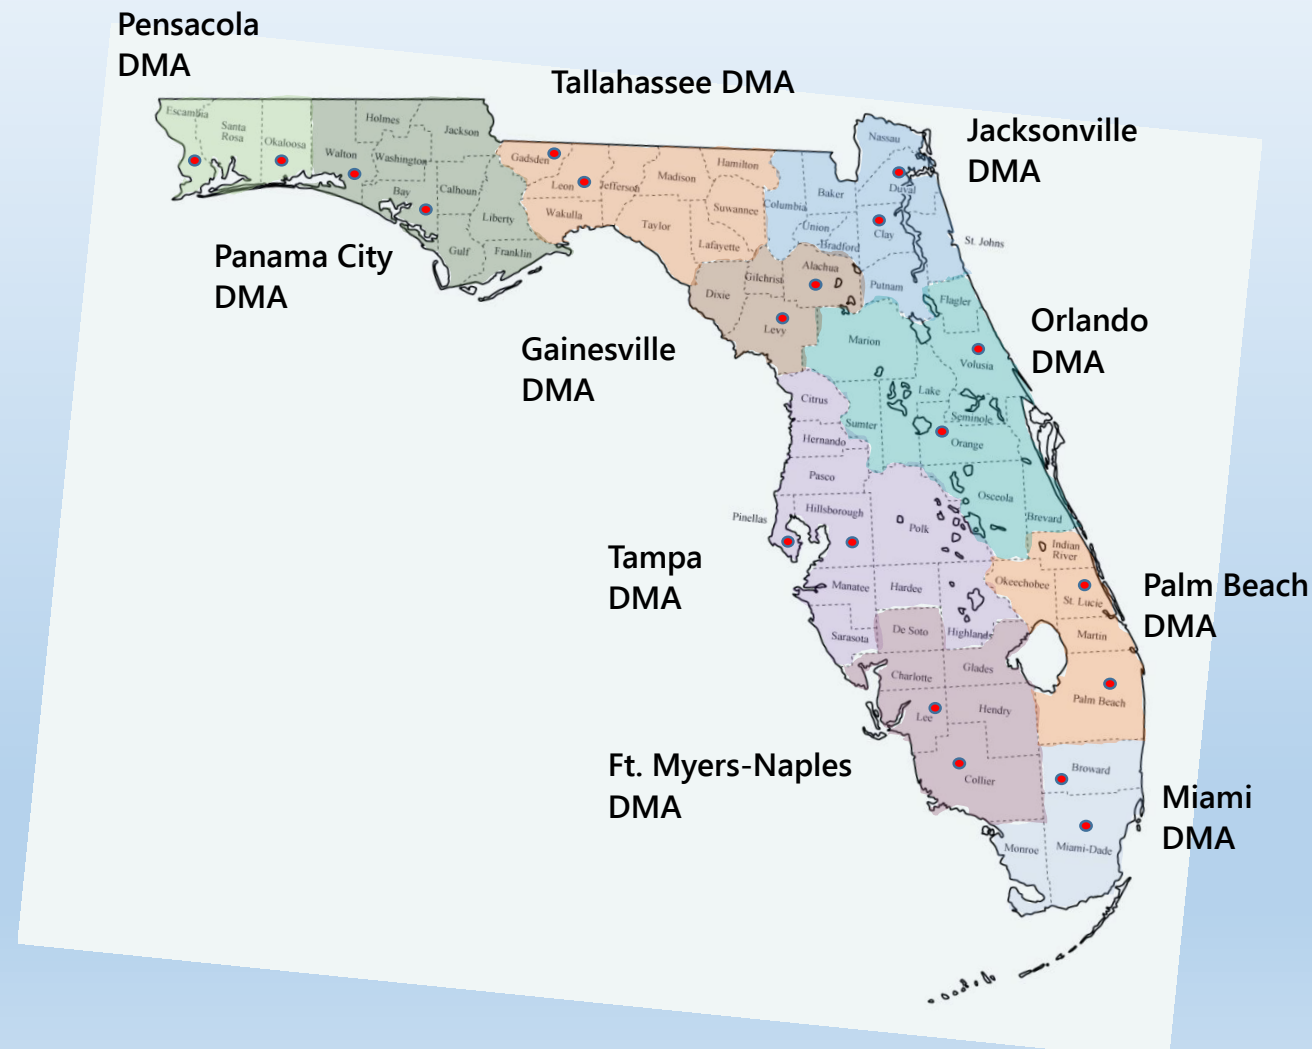

2016 Occupant Protection Assessment (FDOT/NHSTA)

Recommendation for tracking OP use among all age groups, not just front seat belt use at daytime

- Teens
- Tweens
- Children/Infants
- Belt use at Nighttime
- Rear Seat Usage

2017 Observational Survey for Child Restraint

- FDOT/PRG planning in spring 2017
 - Ages birth through age 12
 - Representation from all 10 designated media markets areas (DMA) in the State
- Survey objectives
 - Provide an estimate statewide CPS usage
 - Method for year-to-year comparisons
 - Look at level of compliance for restraint type
 - Adherence to recommendation up to age 12 ride in rear seat

2017 Observational Survey for Child Restraint- Survey Details

200 sites included in survey

- 10 sites per 20 counties
- 2 highest population counties per DMA (10 DMAs)
- 10 DMAs* 2 counties * 10 sites = 200 sites

Observation sites types

- Daycares
- Shopping centers
- Recreation areas
- Restaurants

Day and Time

- Weekdays and weekend days in every county
- 8 a.m. - 6 p.m.
- 60 min. observation periods

2017 Observational Survey for Child Restraint- Survey Details

Child, driver and vehicle information collected

- Age category of **child** (0-3) (4-5) (6-12)
- Age category of **driver**
- **Driver** sex and race/ethnicity
- Vehicle type

Seating position

- Was the child passenger(s) in the **front** row, **second** row or **third** row of vehicle?

Type of restraint used or not using?

- Rear facing child safety seat
- Forward facing child safety seat
- Booster seat
- Safety belt
- **None used**

Survey Limitations

- Unobtrusive observation surveys cannot determine correct usage nor point to common misuses
- Unobtrusive observation method has difficulty with detecting backless-boosters
- The survey is a convenience sample
- Drilling down into the data on the local (DMA) level provides a large margin of error

Who Was Observed?

Observers collected data on 5,230 children riding in 4,550 passenger vehicles

Estimated ages for those observed

- Age 0-3 (n=1,770)
- Age 4-5 (n=1,303)
- Age 6-12 (n=2,072)
- Age Unknown (n=85)

14.1 percent (+/- 0.96; 95% confidence) of the children observed
were **unrestrained** across the State of Florida

Ages 0-3

Ages 4-5

Ages 6-12

■ Using Restraint ■ Not Restrained

Restraint Use by Age and Restraint Type Category

		<u>Ages 0-3</u> (n=1,770)	<u>Ages 4-5</u> (n=1,303)	<u>Ages 6-12</u> (n=2,072)
	Rear-Facing Infant Seat	27% (n=481)	0% (n=0)	0% (n=0)
	Forward-Facing Car Seat	65% (n=1,152)	8% (n=104)	0% (n=1)
	Booster Seat	0% (n=7)	46% (n=599)	4% (n=77)
	Safety Belt	2% (n=34)	24% (n=315)	80% (n=1,654)
	No Restraint Used	5% (n=96)	22% (n=285)	16% (n=340)

SEATING POSITION AND RESTRAINT USE

	% in a REAR Seat	% in the FRONT Seat
	% Restrained	% Restrained
Ages 0-3	98% (n=1,732) 95%	2% (n=33) 55%
Ages 4-5	91% (n=1,187) 79%	9% (n=112) 63%
Ages 6-12	58% (n=1,193) 80%	42% (n=867) 89%
Total*	4,112	1,012

*Table includes passengers whose age and seating position were recorded (n=5,124). Seating position was not recorded for 21 children.

Note 92% of drivers transporting a child were wearing a safety belt

When Driver is Belted

Unrestrained Restrained

When Driver is NOT Belted

Unrestrained Restrained

Summary

The 2017 survey found that **14 percent** of the children observed were clearly **unrestrained**

Children Ages 0-3

- Our observations found these children mostly in the second or third rear row of the vehicle (98%)
- Nearly all of these children were using some sort of restraint device (95%)
- Overwhelmingly this age group appeared using an age appropriate device (92%)

Children Ages 4-5

- Our observations found this age group mostly riding in a second or third row of the vehicle (91%)
- Close to half of this age group (46%) were using booster seats or seat belts (22%)
- **22 percent** in this age group were clearly **unrestrained**

Summary

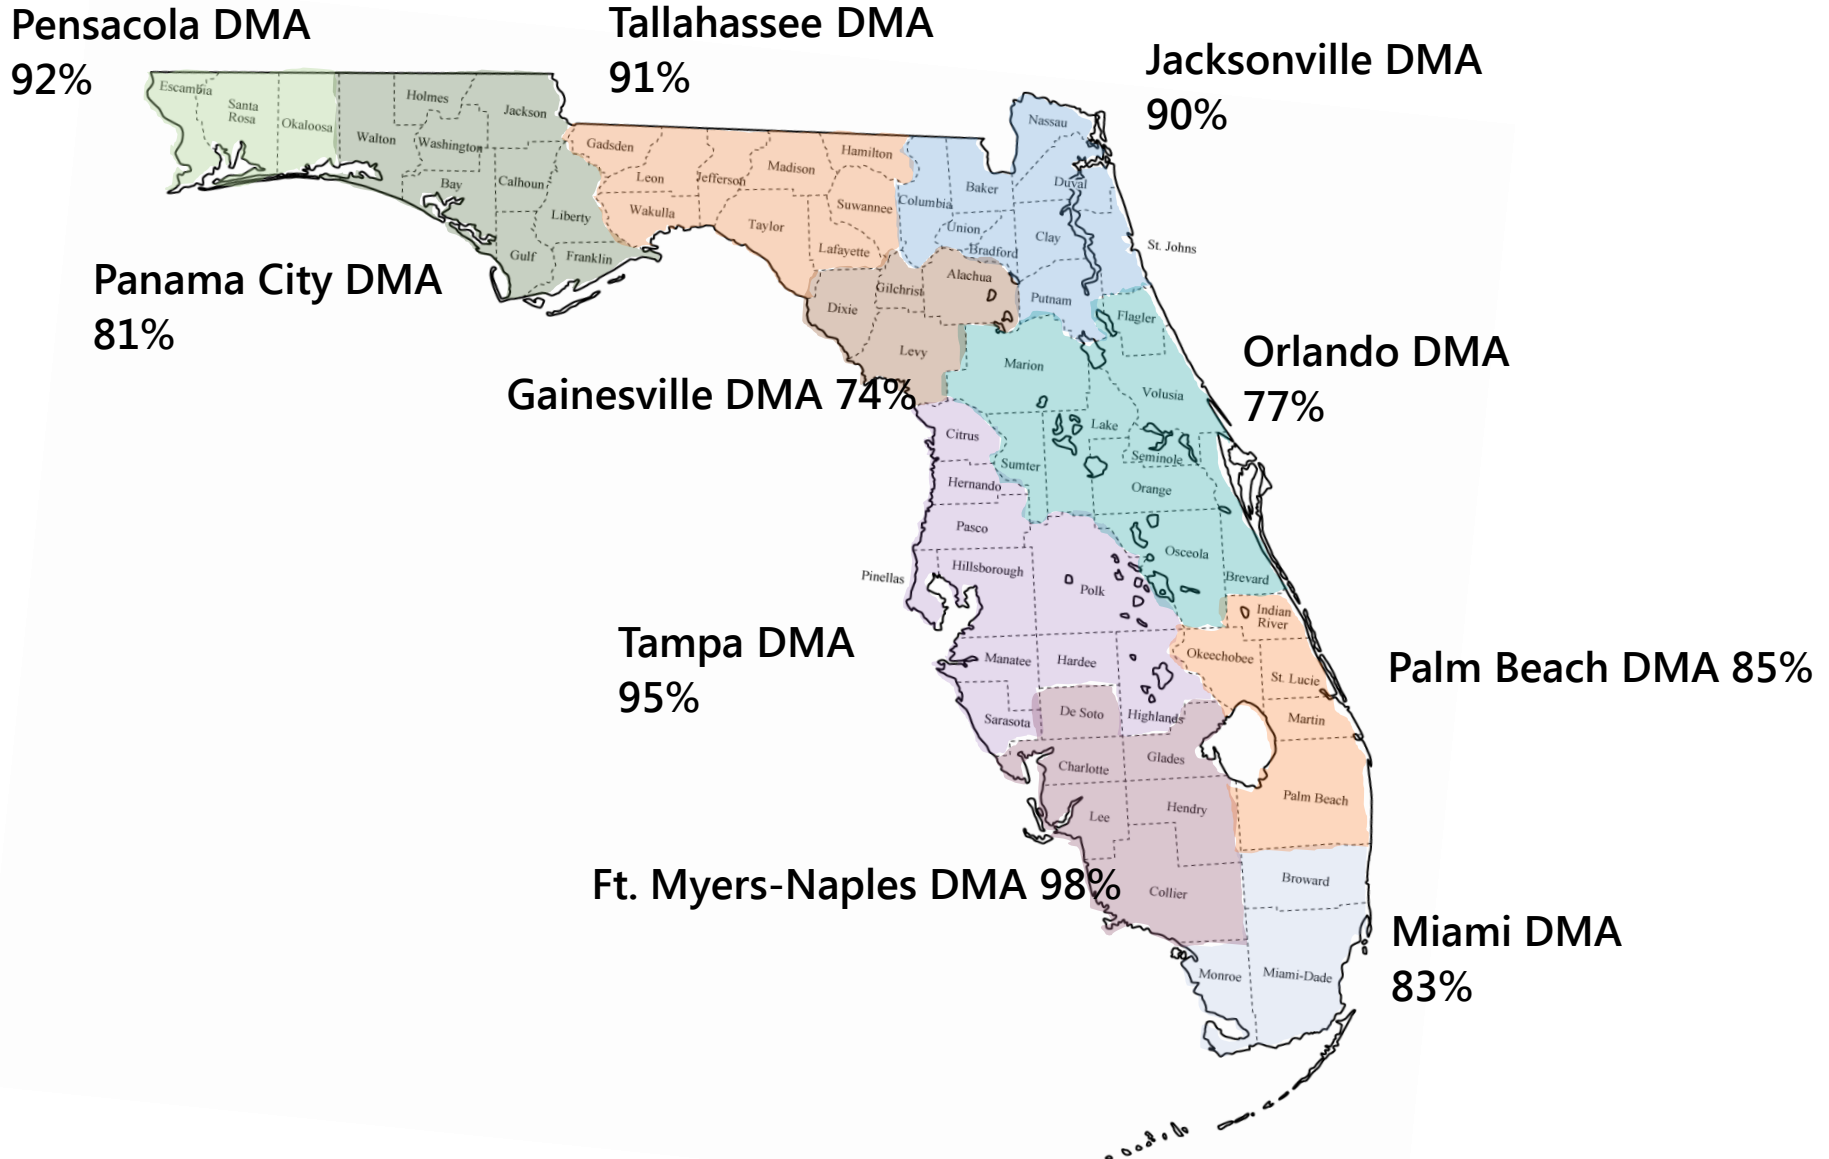

Children Ages 6-12

- Our observations found this age group more split among front and rear rows of the vehicle
- **16 percent** in this age group were clearly **unrestrained**
- Seat belt usage was more likely in the front row of the vehicle compared to the rear rows (89% vs 80%)

Role of the Parent Gaurdian

The 2017 survey found that children travelling with an unbuckled driver were far more likely to be unrestrained

2017 Child Observational Use by DMA

Restraint Use by DMA

									RESTRAINT USE BY AGE CATEGORY				
	DMA	COUNTY	Age 0-3	Age 4-5	Age 6-12	Unk. Age	County Total	DMA Total	0-3	4-5	<6	6-12
